CTN-0027 CRF Level Data De-Identification Notes

The Case Report Form (CRF)-level de-identified data sets were prepared by reviewing the CRFs and the data dictionary to identify a list of variables that contained, or could potentially contain, identifying information, such as dates and free text fields. The variables were programmatically removed or modified in the raw dataset, resulting in de-identified datasets. All dates were converted to “days on study,” where the date of randomization (BASEDATE) = 0. A negative value for days on study refers to an event that occurred prior to randomization and a positive value for days on study refers to an event that occurred after randomization (e.g., 12-month visit date). Age in years at randomization was also calculated based on randomization date and date of birth and entered in the date of birth field.

The following free text fields were emptied:

- Any responses derived from “Other. Please specify” or “Specify other reason”. For example, other races, marital status, therapy sessions, SAE categories, reasons study drug not given, abnormalities on ECG and Urine Analysis forms.
- Comment fields
- AE/SAE terms were retained in the database, but any detailed descriptions in a separate field providing additional information the AE or SAE were emptied. This includes relevant labs, medical history and medications, drug/alcohol use description, probable cause of death.
- On dosing logs: lot numbers, who administered dose.
- All medical history information.
- Concomitant medication names, purposes, and start year were *retained* in the database, but start dates and months were dropped.
- All protocol violations
- Type of work; job description/parents' type of work; school program name and major; descriptions of living situation, illnesses, concerns, drug/alcohol use, feelings/interests.
- Date field with field type as character were also emptied as they did not represent correct dates.

Following is a list of all variables in the dataset that were modified or emptied in order to de-identify the data, based on the following commands:

PATDEID assigns to each study participant a unique value in a variable called PATDEID.

BASEDATE names the variable that is used as the base date to calculate days on study. In this study, BASEDATE is date of randomization.

DOS names a variable that is to be converted from a date into days on study.

EMPTY defines a variable to fill with missing values.

DROFILE defines a data set to drop.

The following documentation presents information on the variable based on the name within the database. To get the corresponding label of the variable, one must look within the data dictionary in Excel that is also provided on the NIDA Clinical Data Share Website.

Datasets dropped from the De-identification of the study:

1. t_frgen – Genetics dataset
2. t_frpvl – Protocol violation log dataset

For all the datasets dates were changed to days of study and site was emptied.

CTN-0027 CRF Level Data De-Identification Notes

Databases for this protocol are available for download in both SAS and ASCII/comma separated value (CSV) format. When you retrieve the datasets from the data download page on the NIDA Clinical Data Share Website, a ZIP file will be provided containing the datasets.

Note that when you download the SAS datasets, the files will be SAS transport files. The `transport.xpt` contains all the SAS datasets available. The following code can be executed in SAS to retrieve the individual SAS databases.

```
libname newlib "[Name of Path where you want to store the SAS datasets. E.g.: c:\temp\CTN0027]";  
filename tranfile "[Name of path where you store transport.xpt. E.g.: C:\temp\ transport.xpt>";  
proc cimport library=newlib infile=tranfile; run;
```

Also in the SAS ZIP file are SAS transport files corresponding to each individual database. These files are provided to allow import into SPSS and differ slightly from the SAS datasets in the `Transport.xpt` and from the data dictionaries provided. We describe below specific modifications to the SAS datasets to accommodate SPSS import.

1. Renaming of SAS dataset to conform to 8 character limits:

- a. T_FRASF1A was renamed to T_FRAS12
- b. T_FRASF2A was renamed to T_FRAS14
- c. T_FRASF4A was renamed to T_FRAS17
- d. T_FRASL1A was renamed to T_FRAS20
- e. T_FRASL2A was renamed to T_FRAS22
- f. T_FRASL3A was renamed to T_FRAS24
- g. T_FRASL4A was renamed to T_FRAS26
- h. T_FRCOWS2 was renamed to T_FRCO29
- i. T_FRPBC_BL was renamed to T_FRPB43
- j. T_FRPOC1A was renamed to T_FRPO47
- k. T_FRRBS0A was renamed to T_FRRB49
- l. T_FRSAE2A was renamed to T_FRSA54
- m. T_FRSAE2B was renamed to T_FRSA55
- n. T_FRUDSAB was renamed to T_FRUD59

2. Truncation of fields to make sure that the field length is less than 200 characters.
